Professional Summary

Computational Materials Scientist with over 5 years of experience specializing in atomistic simulations and multiscale modeling of deformation mechanisms in advanced structural materials. Expert in deploying large-scale molecular dynamics (MD) workflows using **LAMMPS** on high-performance computing (HPC) platforms to characterize defect evolution, dislocation dynamics, and fracture under extreme thermo-mechanical loading conditions. Highly proficient in utilizing **Python** for scientific computing, high-volume simulation data analysis, and predictive model development. Proven track record of conducting microstructure-sensitive modeling of high-temperature alloys and refractory metals, directly transferable to predicting material behavior in nuclear and reactor environments.

Core Competencies

Atomistic & Multiscale Modelling	⚙️	Molecular Dynamics (MD), Discrete Dislocation Dynamics (DDD), Atomistic Simulations, Microstructure Evolution, Defect Mechanics
Computational Modeling Tools	🔑	LAMMPS , OVITO, Atomsk, ABAQUS, ANSYS, COMSOL
Programming & Scientific Computing	📄	Python , High-Performance Computing (HPC, MPI/OpenMP), C++, Fortran, Bash, Parallel Simulation Frameworks, Git
Data Analysis & Visualization	📊	NumPy, Pandas, SciPy, Matplotlib, Automated Post-Processing, High-Volume Simulation Data Analysis
Tools & Environments	💻	Linux (Ubuntu), High-Performance Computing Clusters, Git/GitHub, LaTeX

Experience

April 2026 – Present	Postdoctoral Research Fellow, Merrimack College, Mechanical Engineering, North Andover, MA, USA ➤ Leading multiscale MD/DDD investigations into deformation, defect evolution, and Ductile-to-Brittle Transition Temperature (DBTT) shifts in tungsten and tungsten–rhenium alloys. ➤ Deploying high-throughput, automated LAMMPS simulation workflows across HPC clusters to quantify atomistic mechanisms governing low-temperature cleavage and DBTT. ➤ Developing computational frameworks to isolate the effects of dislocation density, radiation-induced defects, and crack-tip plasticity on brittle-to-ductile transitions under extreme loading. ➤ Engineering custom Python pipelines (NumPy/Pandas) to accelerate post-processing and analysis of large simulation datasets. ➤ Collaborating with industry and academic partners on technical reports and proposals for predicting material integrity in extreme environments. ➤ Mentoring graduate and undergraduate students in computational mechanics and parallel molecular dynamics setups.
Jan 2025 – Dec 2025	Junior Research Fellow (DRDO Project), IIT Bombay, Aerospace Engineering, Mumbai, India ➤ Conducted research on the constitutive modelling and high strain-rate response of Shape Memory Alloy (SMA)-based composites for aerospace and defense applications. ➤ Performed dynamic impact experiments using Split Hopkinson Pressure Bar (SHPB) systems to characterize material behaviour under high strain-rate loading. ➤ Integrated experimental observations with numerical simulations to calibrate and validate constitutive models for aerospace structural applications. ➤ Assisted in project execution, data analysis, and mentoring of junior researchers in experimental characterization and computational modelling.

- Jan 2019 – June 2025** **Ph.D. Research Scholar, IIT Bombay, Aerospace Engineering, Mumbai, India**
- Designed and executed large-scale atomistic simulations using **LAMMPS** on high-performance computing platforms to investigate generalized stacking fault energies, defect mobilities, and dislocation core structures.
 - Developed a physics-informed hierarchical multiscale framework that maps atomistic-derived parameters (drag coefficients, obstacle strengths, and lattice strain fields) directly into mesoscale continuum models.
 - Engineered automated post-processing and data-mining pipelines using **Python** to parse high-volume molecular dynamics (MD) trajectory data, track defect coordinates, and analyze structural evolution via OVITO.
 - Authored a custom parallel polycrystalline Discrete Dislocation Dynamics (DDD) code coupled with Finite Element Analysis (FEA) to simulate 3D defect interactions and slip localization near internal interfaces.
 - Utilized parallel computing (MPI) to scale atomistic simulations up to multi-million atom systems, establishing quantitative relationships between alloy microstructures and mechanical response under high stress fields.
- Jan 2019 – Dec 2023** **Graduate Teaching Assistant, IIT Bombay, Aerospace Engineering, Mumbai, India**
- Assisted instruction in Continuum Mechanics, Finite Element Methods (FEM), and Multiscale Modeling for undergraduate and postgraduate engineering courses.
 - Developed and supervised computational laboratory exercises involving numerical methods, finite element analysis, and scientific programming.
- June 2016 – Dec 2018** **Assistant Professor, CMR Institute of Technology, Mechanical Engineering, Bangalore, India**
- Taught undergraduate courses in Finite Element Methods, Experimental Stress Analysis, and Solid Mechanics.
 - Developed computational laboratory modules using ANSYS, MATLAB, and Python to support engineering analysis and numerical modelling.
- June 2014 – July 2016** **Graduate Teaching Assistant & M.Tech. Researcher, IIT Kharagpur, Mechanical Engineering, Kharagpur, India**
- Developed and validated computational models using ABAQUS and ANSYS for structural mechanics and vibration analyses.
 - Conducted laboratory instruction in Finite Element Modelling, Vibration Analysis, and Tribology, integrating theoretical concepts with numerical simulations.

Education

- Jan 2019 – Dec 2025**  Indian Institute of Technology - Bombay, Mumbai, India
 Doctorate, Aerospace Engineering
Thesis : Multiscale Modeling of Prior Particle Boundaries in Nickel-based Superalloys
CGPA : 9.36/10 *Funding* : MHRD Teaching Assistantship through Project
Key Subjects : Multiscale Modeling, Continuum Mechanics, Plasticity, Computational Mechanics
Advisors : Prof. Amuthan A. Ramabathiran, Prof. P. J. Guruprasad
- Jun 2014 – Jul 2016**  Indian Institute of Technology - Kharagpur, West Bengal, India
 M.Tech., Mechanical Engineering (Mechanical System Design)
Thesis : A Mesh-Free Model for Static Analysis of Smart Composite Beams
CGPA : 8.85/10 *Funding* : MHRD GATE Fellowship
Key Subjects : Solid Mechanics, Fracture Mechanics, Finite Element Methods, Composites, Elasticity, Vibration
Advisor : Prof. Manas Chandra Ray

Certifications

Jan 2020		Using Python for Research , edX, HarvardX, Harvard University.
Aug 2020		The Unix Workbench , Coursera, Johns Hopkins University.
Aug 2020		Material Behavior , Coursera, Georgia Institute of Technology.
May 2018		A Hands-on Introduction to Engineering Simulations , edX, CornellX, Cornell University.

Awards, Achievements, and Honorable Mentions

2025		Membership : Member of The Minerals, Metals & Materials Society (TMS), USA
2025		Institution of Eminence Funds, IIT Bombay : Awarded to attend the international conference <i>TMS 2025</i> , USA
2023		IIT Bombay Travel Grant : Awarded to attend the international conference <i>COMPLAS 2023</i> , Spain
2019		MHRD Teaching Assistantship Through Project : Awarded by the Industrial Research and Consultancy Centre (IRCC)
2014		All India Rank 69 : Achieved in the Graduate Aptitude Test in Engineering (GATE)
2013		Permanent Membership : Awarded permanent membership as an Associate Member at the Aeronautical Society of India
